

ENVIRONMENTAL POLICY

FAVERO Health Projects has decided to commit itself to manage its business in a responsible way and in agreement with the protection of the interests of its workers, respecting the environment in which it operates.

The actions carried out in this regard are the implementation of an Environmental Management System compliant with the requirements expected in the UNI EN ISO 14001 standard and its maintenance over time.

FAVERO Health Projects is also committed to making visible its commitment through appropriate forms of communication by making its environmental policy available to the public. To this aim, the company is committed to ensuring:

Environmental protection, including pollution prevention.

Compliance with applicable environmental laws and environmental regulations and all compliance obligations for interested parties.

Continuous improvement of the environmental management system to increase environmental performance and reduce environmental impacts to a level corresponding to the economically possible application in relation to the best available technology.

The engagement of all staff through training and awareness of environmental issues and aspects related to hygiene and safety in the workplace in order to increase the effectiveness of defined improvement and management actions.

Attention to the needs and expectations of the involved parties, with particular attention to the research of the reduction of the environmental impacts of the product in the different phases of the life cycle.

The awareness of suppliers with particular attention to those that implement an environmentally friendly behavior and in any case in line with company policies.

The implementation of annual environmental improvement plans with the definition of objectives and goals that lead to highlighting the optimization of the company's environmental performance;

The continuous monitoring of the progress of the scheduled actions for the achievement of the goals.

Periodic reviews of the Environmental Management System to verify compliance with the Environmental Policy and the management procedures and the achievement of the pre-established environmental objectives.
